Rheem Electric Low Pressure Vitreous Enamel Hot Water Cylinders

Proven Technology for New Zealand

VE, a tough durable coating fused to the inside of the steel tank, remains a mainstream, market-leading product with decades of development behind it. Rheem Vitreous Enamel water heaters provide the best corrosion resistance to a wide range of water conditions including varying pH levels, high chlorides, hard water and MIC (Microbiological Induced Corrosion) as found in parts of the country and areas with untreated bore water.

Furthermore, VE lined steel cylinders are virtually immune to pitting, crevice, stress and intergranular corrosion, all of which can shorten the life of other types of tanks.

Benefits of using Rheem Low Pressure Vitreous Enamel Water Heaters

- Reduced risk of theft — non copper tank
- Proven & tested Vitreous Enamel Technology
- Designed & manufactured by Rheem in New Zealand
- Designed & built to suit a wide range of water conditions
- Designed to operate as Low Pressure Heavy Head — 120 kPa
- Triple inlet as standard — option for left, right or bottom inlet
- Backed by the Rheem Nationwide Sales & Service Network
- NZ MEPS Compliant
- 7 Year Warranty*
- Lower entry cost
