

Guide to upgrading or replacing your continuous flow water heater which is currently installed in a recess box.

Use the following flow chart to establish the required action;

Measure the depth of the recess box by removing the door and measuring from the back face to the outside face as indicated in the image shown right.

- If this dimension is approximately 180mm any sized continuous flow unit can be installed;
A new door kit to match the new continuous flow unit is required;
#318993 (for 27L) OR #318995 (for 16L, 20L, 24L or 26L)
- If this dimension is approximately 230mm, continuous flow units up to and including 26L may be installed (27L units are not compatible);
A new door to match the new unit is required - #318995
An adaptor to modify the mounting is also required - #320124

* No guarantees of fitment, it is the responsibility of the installer to ensure the installation is safe and code compliant.
